Business Administration (MIS) · Bellingham, WA · palomarescarlitos24@gmail.com · linkedin.com/in/carlosalbertopalomares

SUMMARY

Management Information Systems student focused on building practical systems that make business work easier to track, automate, and improve. I am especially interested in where operations, data, and software meet: cleaning workflows, validating information, building automations, and turning technical ideas into tools people can actually use. My background combines revenue reporting and data auditing at Laz Parking with hands-on projects in Python automation, web applications, cloud deployment, and desktop application development.

EDUCATION

Western Washington University
B.A. in Business Administration, Management Information Systems · Bellingham, WA

Expected Jun. 2026

Green River College
AAS-T in Cybersecurity and Networking · Auburn, WA

Oct. 2020 – Dec. 2022

PROFESSIONAL EXPERIENCE

Laz Parking
Administrative Assistant · Seattle, WA (Remote)

Jun. 2023 – Present

- Developed script-assisted workflows that reduced repetitive data entry and improved consistency across recurring reporting tasks.
- Maintained revenue ERP records for daily vehicle counts, transaction types, and parking activity across client reporting workflows.
- Audited operational and revenue reports to identify discrepancies, correct data issues, and strengthen reporting reliability.
- Coordinated client follow-ups for missing reports, helping maintain complete records and stronger data integrity.

Laz Parking
Shuttle Dispatcher · Seattle, WA (Remote)

Jan. 2023 – Jun. 2024

- Coordinated campus shuttle pick-up and drop-off operations while supporting students in a professional, service-focused environment.
- Communicated with drivers and managers to resolve delays, route issues, and service concerns during daily operations.
- Documented rider feedback and service issues for management review, supporting clearer communication and continuous improvement.
- Supported shuttle awareness through event outreach and student-facing communication.

SELECTED PROJECTS

Python Workflow Automation
Automated Data Processing Pipeline

Mar. 2025 – Present

- Configured a Google Cloud virtual machine and deployed Python scripts to automate daily parking and revenue report processing workflows.
- Developed a master script to retrieve email attachments, group transaction types, sort parking tickets, and compile outputs into a structured Excel workbook.
- Automated daily email delivery of the master workbook, allowing the workflow to run without a local machine or manual intervention.
- Built browser-based ERP data-entry automation prototypes using Python, cloud infrastructure, and iterative debugging workflows.

OverEgg
Windows Overlay & Real-Time Location Companion App

May 2026 – Present

- Built a Python/PySide6 desktop overlay for The Isle, displaying a real-time interactive map so users can track location without switching applications.
- Developed external coordinate capture workflows using OCR, clipboard parsing, and manual fallback input, then converted raw location text into live map markers.
- Implemented WebSocket-based multiplayer sync with hosted room codes, allowing users to share positions, colors, and custom markers through a Dockerized Railway relay server.
- Packaged the app into a distributable Windows executable with PyInstaller, bundled assets, map data, configurable hotkeys, and user-facing setup controls.

TECHNICAL SKILLS

Programming & Scripting: Python, SQL, PowerShell, Bash, Batch Scripting, TypeScript

Web & Application Development: HTML, CSS, Razor Pages, ASP.NET Core, Blazor, React, Tailwind CSS, API Integration, AI-Assisted Development

Data & Analytics: Excel, Power Query, Tableau, MySQL, Data Cleaning, Data Validation, Data Auditing, Python Data Analysis

Database & Systems Design: Entity-Relationship Diagrams (ERDs), Relational Database Design, Database Modeling, SQL Queries, SDLC Documentation

Automation & Workflow Tools: Power Automate, n8n, Python Automation, Workflow Automation, Process Improvement

Cloud & Developer Tools: Azure, AWS, Google Cloud, Render, Railway, Supabase, Resend, GitHub, Visual Studio, Visual Studio Code, Application Deployment

Business & IT Operations: Windows Support, PC Troubleshooting, Microsoft 365, Data Confidentiality, Operational Reporting, Detail-Oriented Data Entry

Professional Skills: Written Communication, Team Collaboration, Stakeholder Communication, Problem Solving, Project Coordination, Time Management, Business Process Analysis
